Career Objective

Aspiring **AI Engineer** with knowledge of **Python, Machine Learning, Deep Learning, NLP, and Generative AI**. Interested in developing practical AI applications and solving real-world problems using data-driven approaches. Seeking an entry-level opportunity to apply technical skills, contribute to AI projects, and continue learning while growing as an AI Engineer.

Technical Skills

Programming: Python, Java, C
AI/ML: Scikit-learn, TensorFlow, Keras, Deep Learning, NLP, Transformers
Generative AI: LLMs, LangChain, Ollama
Databases: MySQL, MongoDB
Core: OOP, SQL, Data Structures, Git, GitHub

Experience

Blackbucks Virtual Intern **June 2025 – July 2025**

- Worked with real-world datasets and explored machine learning workflows using **Python, Pandas, and Scikit-learn**
- Developed a **Crop Recommendation System** using **Flask and Scikit-learn**, applying data preprocessing, feature selection, model training, and evaluation to recommend suitable crops based on input parameters.
- Built additional projects, including **Heart Disease Prediction, End to end Q/A GENAI App, and NLP applications**, to practice classification techniques, text processing, and similarity-based analysis.
- Expanded practical knowledge of **Deep Learning and Generative AI** through self-learning projects involving neural networks, RNNs, LSTMs, GRUs, Transformers, English-to-Telugu translation, LLMs, and LangChain. "'

Projects

AI Chatbot using LangChain and LLMs GitHub

- Built an **AI-powered document question-answering application** using **LangChain, Gemini LLMs, and RAG** to answer user questions based on uploaded PDF documents.
- Implemented document processing, text chunking, embeddings, and **FAISS vector search** to retrieve relevant information and generate context-aware responses.
- Developed a **FastAPI backend** and a **React/Vite frontend**, integrating PDF uploads, conversational queries, and streaming AI responses.
- Deployed the backend on **Render** and the frontend on **Vercel**, configuring API communication and cross-origin access for the live application.

Heart disease prediction with Machine Learning GitHub

- Built and evaluated multiple ML models (Logistic Regression, Decision Tree, Random Forest, KNN) using **scikit-learn**.
- Compared model performance using preprocessing, confusion matrices, and key metrics like accuracy, precision, and F1-score.
- Identified **Random Forest** as the top-performing model based on evaluation results.

Education

Sagi Rama Krishnam Raju Engineering College *2022 – 2026*
B.Tech in Computer Science and Engineering (CGPA: 8.52) Bhimavaram, AP

Narayana Junior College *2020 – 2022*
Intermediate in M.P.C Stream (Percentage: 90.0%) Guntur, AP

Sarada High School *2019 – 2020*
Secondary School Education (Percentage: 95.2%) Parchur, AP

Achievements

Solved 230+ coding problems on LeetCode.
Solved 130+ coding problems on Geeks for Geeks.

Certifications

Python for data scinece:NPTEL
Introduction to Data Science:EDX
Programming Essentials in Python – Cisco
ML-Connect: Workshop conducted on machine learning basics —
